

BUG 1

History – Filtered Image

Description: Filter is applied to a diagram and it is saved as a new diagram. History does not show it. The tree updates and displays both diagrams.

Testing was the original diagram – renamed to TestGraph and saved.

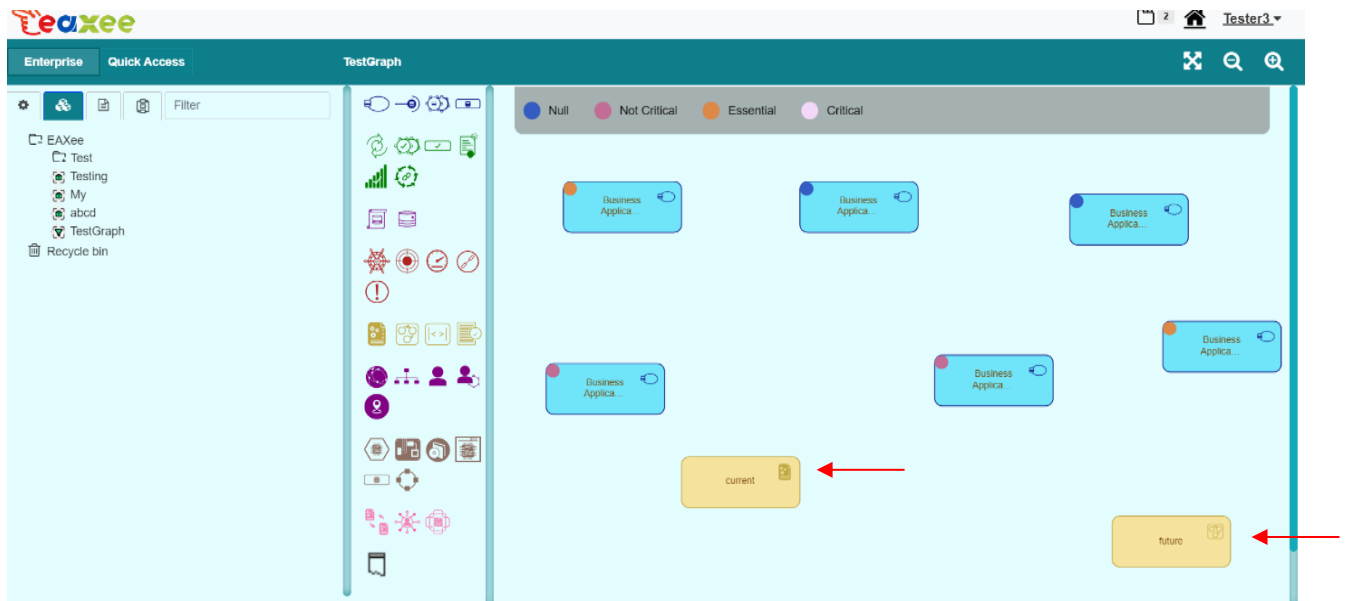

BUG 2

Filter Image – Hide unrelated objects

Description: Hide/unrelated object checkbox was selected from the diagram dialog box and the diagram was saved. But the objects were displayed after the diagram was re-opened.

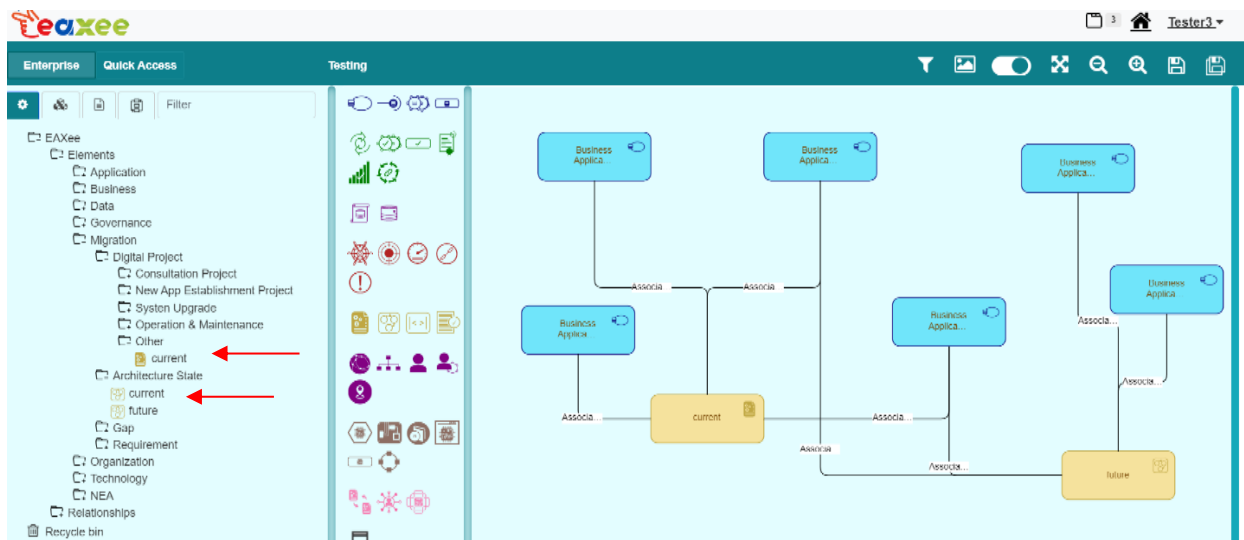

Current and future were displayed.

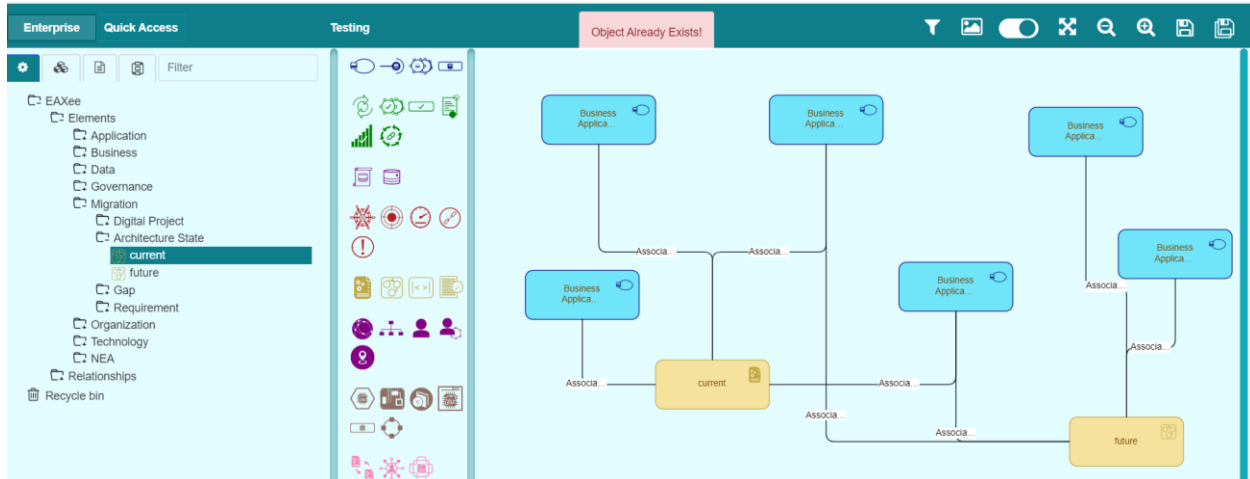

BUG 3

Duplicate Object Names

Description: Two objects of same name were created (Diagram Project from drawing canvas) and (Architectural state from the tree)

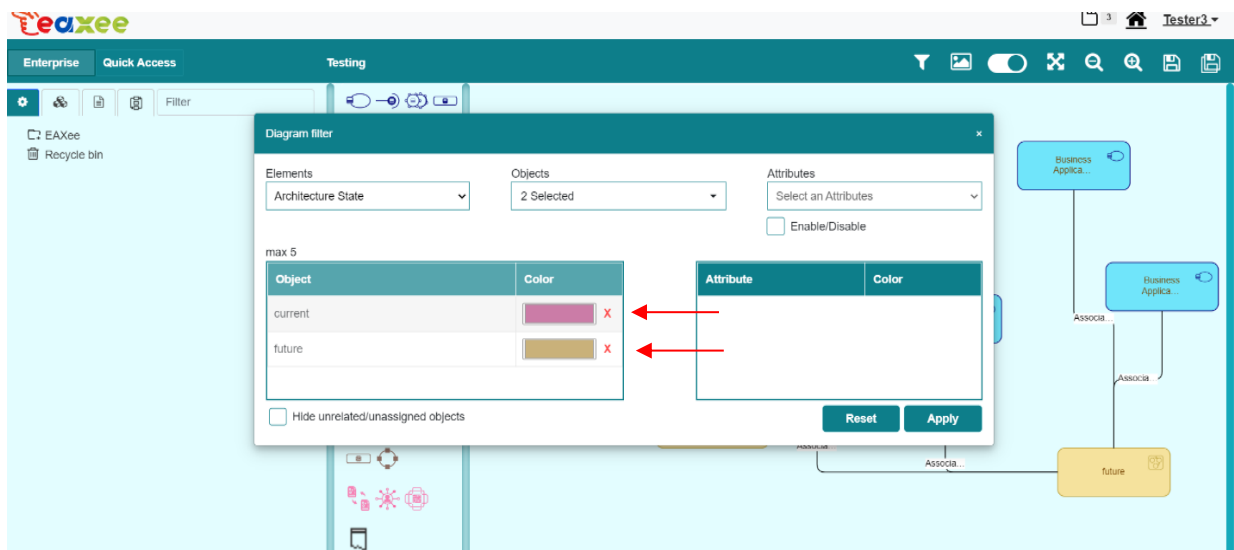

The drawing canvas therefore does not let the user add another object.

BUG 4

Diagram Filter Color

Description: Diagram filter color is not editable.

BUG 5

Quick Access

Description: Quick access works if selector is dropped to 0 (does not let the user further change it from 0 to -1) but lets the user manually change it to -1 and displays the result.
