## BUG 1 FILE UPDATE STATUS

Description: An object was created with name "MUT" by both the users and save button was pressed.

USER1 – when initial object was created object name was Business_Application_90Arl425 which was renamed to "MUT". After save was pressed it displayed a warning "another user updated the file" and the file was not renamed.

USER2- initial object was created with another object name which was renamed to "MUT". After save was pressed it displayed successfully updated tree was refreshed user1 **initial file object name** displayed instead of "MUT"

Working: Since the user 2 status was successfully updated the file name should have been saved as MUT at user1 and user2. Instead it displayed the initial file name of user1.

NOTE: TESTER3 IS USER2 and TESTER2 IS USER1

BUG 2 OBJECT NAME

Description: Object with name "Business_Application_90Arl425" was renamed by both the users to "MUT" and save was pressed. The object name was not renamed instead a new object was created with name "Business_Application_XPOrVD26" and "Business_Application_LcvwiF27".

USER1 –initial object name was Business_Application_90Arl425 which was renamed to "MUT". After save was pressed it displayed successfully updated tree was refreshed.
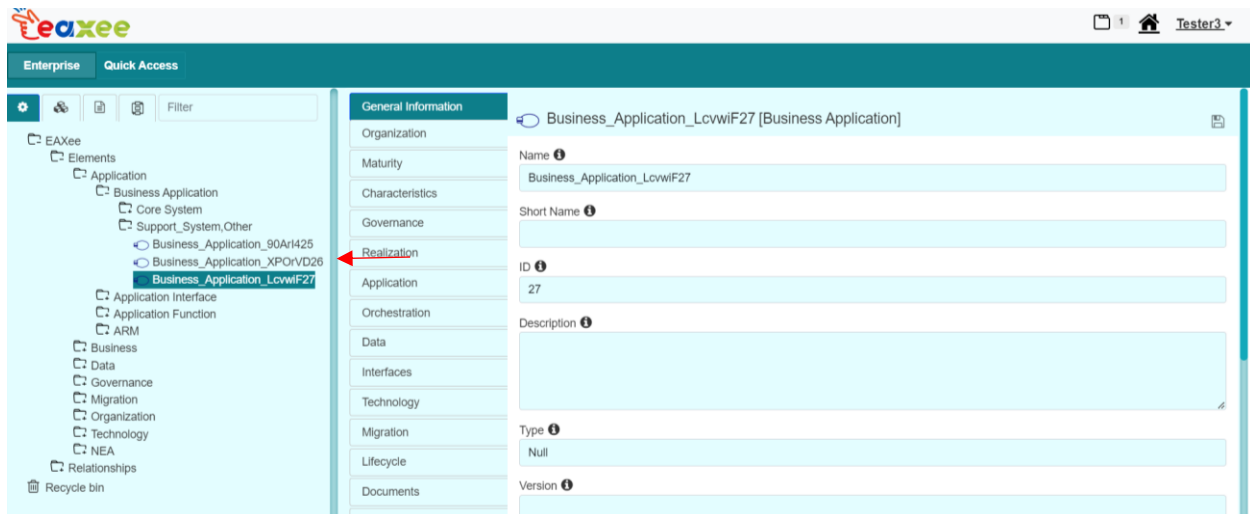

USER2- initial object name was Business_Application_90Arl425 which was renamed to "MUT". After save was pressed it displayed successfully updated tree was refreshed.

Working: The object name should have been renamed to "MUT" but a new object file was created at both users end.
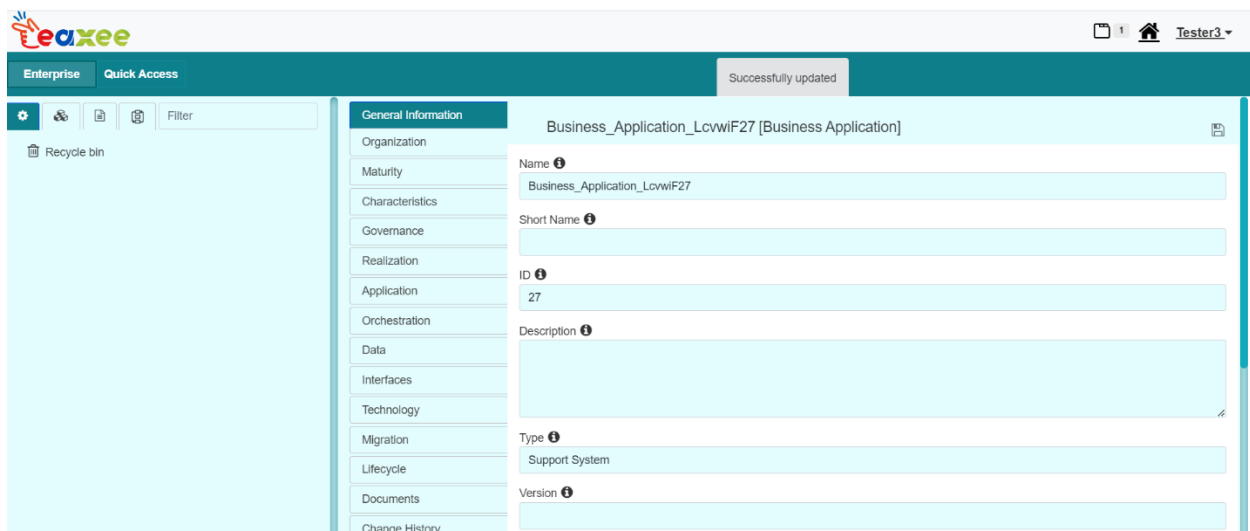

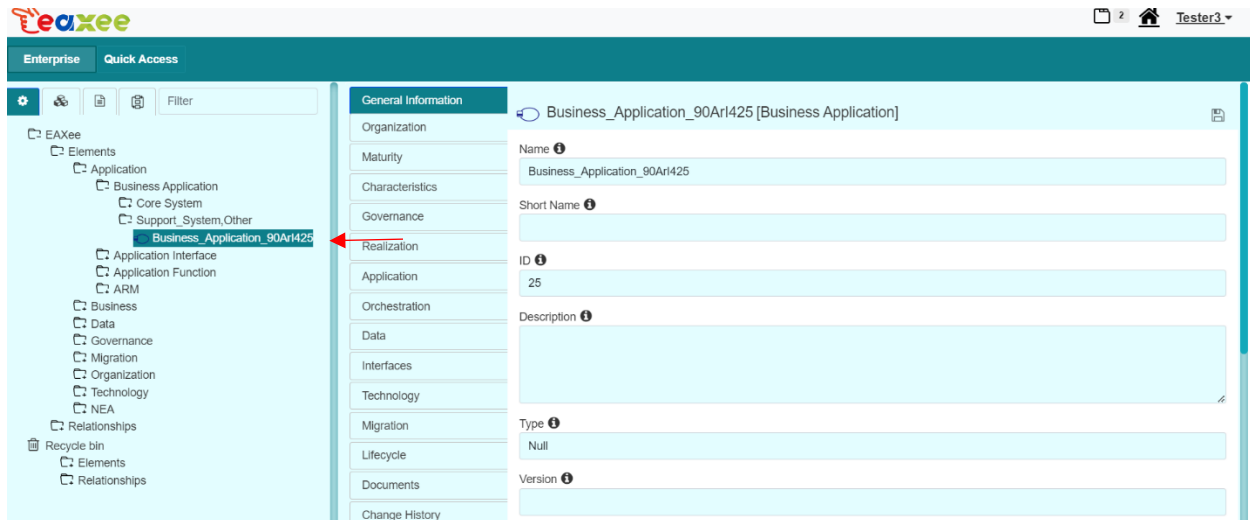

BUG 3 OBJECT NAME UPDATE

Description: Object with name "Business_Application_90Arl425" was renamed by both users to "MUT" and save was pressed. The object name was not renamed it displayed the warning "name already exist" and a new object was created with name "Business_Application_XPOrVD26".

## BUG 4 UPDATE AT ONE USER END (FILE UNAVAILABLE)

Description: Object with name "Business_Application_ LcvwiF27" type and id was changed and save was pressed. System displayed successfully updated tree was refreshed but the object file was not available at both user ends. Only object with name Business_Application_90Arl425 was available.
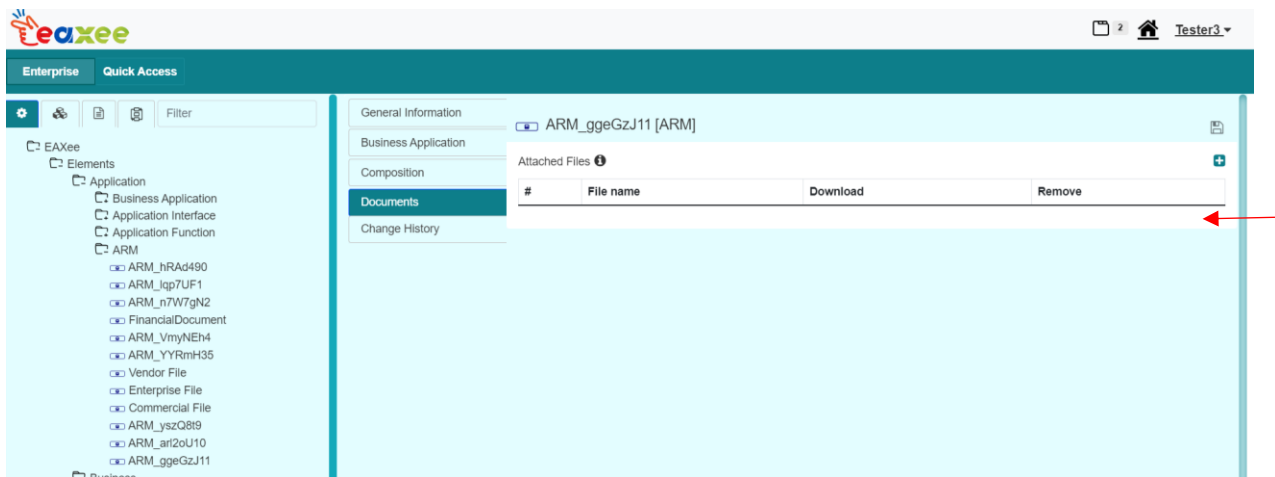

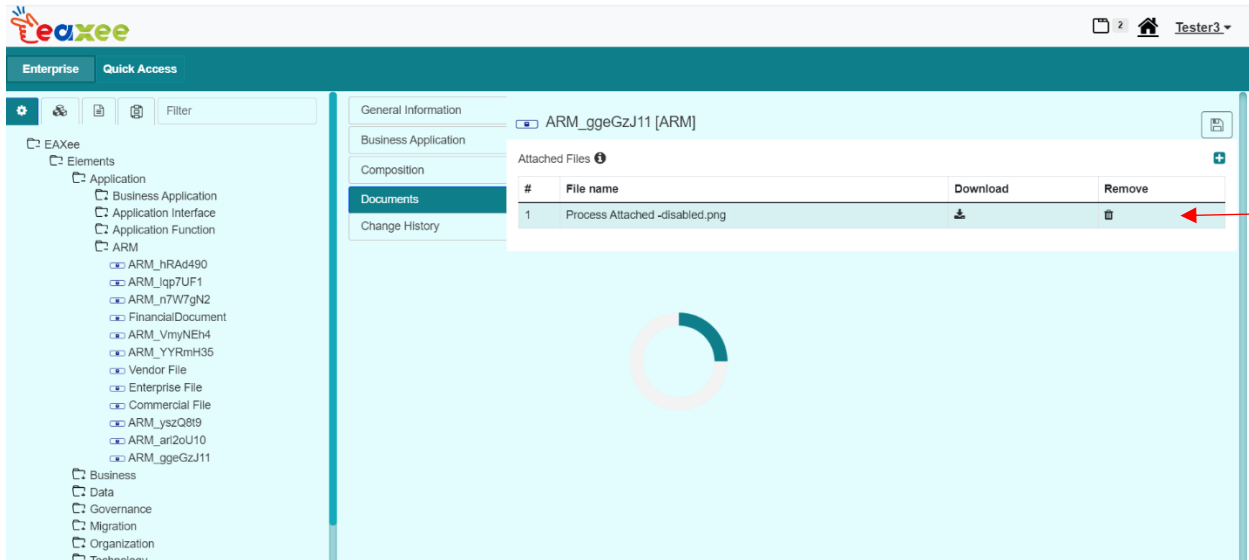

BUG 5 File exist

Description: Since the object with name "Business_Application_ LcvwiF27" was not available (mentioned in the previous bug) therefore a new object was created with same name "Business_Application_ LcvwiF27". System displayed name already exist.

BUG 6 Document Attachment

Description: A document was attached and saved. The message displayed successfully updated and the tree hierarchy updated but no file was displayed. The browser was then refreshed it still did not displayed the document.

At another user end since the file was already opened the document displayed. But after refreshing it got removed from the other user end as well.

Another user end – file displays but after refreshing from browser it got removed.
